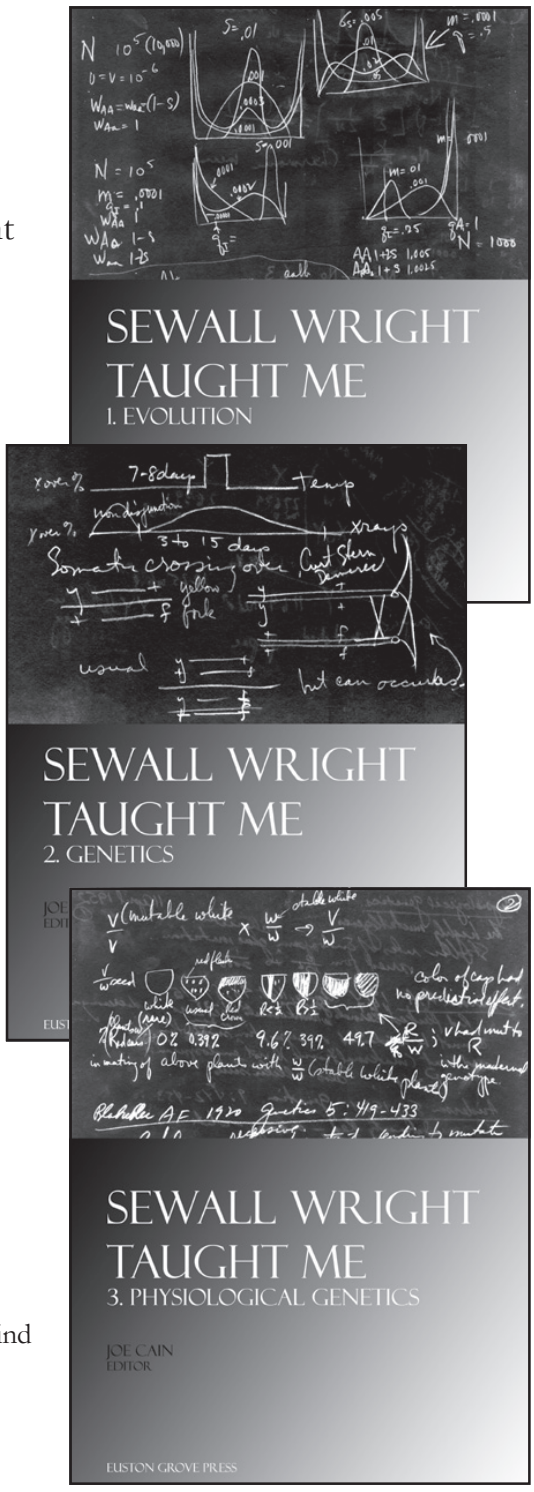
# Sewall Wright
# Taught Me
## Joe Cain, editor



What did famous scientists *actually say* when they taught courses in their specialties? What information, *in fact*, did they convey to their students?

For these questions, student lecture notes are sources of fundamental importance. Normally, these notes are the first objects consigned to the dust bin of history. But not always.

While a master's student at the University of Chicago in 1951-1952, Robert Sloan attended Sewall Wright's courses. He made copious notes. These offer a detailed record of Wright's teaching.

**1. Evolution**

From Wright's *Evolution* (Zoology 313) course, June-August 1951. In addition to lecture notes, this volume includes three population genetics exercises, Sloan's research paper for the course, and Wright's final examination.

paperback USD$19.99 | download USD$49.99
ISBN: 978-1-906267-02-5 (pbk)

**2. Genetics** **free**

From Wright's *Fundamental Genetics* (Zoology 310), January-March 1952. The e-book is available for download cost free.

paperback USD$19.99 | download free
ISBN: 978-1-906267-03-2 (pbk)

**3. Physiological Genetics**

From Wright's *Physiological Genetics* (Zoology 312), March-April 1952.

paperback USD$19.99 | download USD$49.99
ISBN: 978-1-906267-04-9 (pbk)

Ask your library to order the whole series in paperback. Scholars may find the e-book editions especially useful for detailed study as magnification and image adjustment are possible.

**Dr Joe Cain** is Senior Lecturer in History and Philosophy of Biology at University College London. He specialises in the history of evolutionary biology and history of science in London.
